

NovaCare Hospital Analytics

Data Dictionary & Table Metadata Documentation

Table: Patients

Contains demographic information for the hospital's patient population.

Column Name	Data Type	Description
patient_id	Integer (PK)	Unique identifier for each patient.
age	Integer	Age of the patient at the time of data collection.
sex	String	Biological sex of the patient.

Table: Admissions

Tracks operational data for each hospital admission encounter.

Column Name	Data Type	Description
admission_id	Integer (PK)	Unique identifier for the admission encounter.
patient_id	Integer (FK)	Foreign key linking to the Patients table.
admission_date	DateTime	Timestamp indicating when the patient was admitted.
discharge_date	DateTime	Timestamp indicating when the patient was discharged.
admission_type	String	Classification of admission (e.g., Emergency, Elective, Urgent).
department	String	Hospital department where care was provided.
discharge_disposition	String	The location or status of the patient upon discharge (e.g., Home, Rehab, Skilled Nursing).

Table: Diagnoses

Links medical diagnoses (ICD-10 codes) to specific admission encounters.

Column Name	Data Type	Description
diagnosis_id	Integer (PK)	Unique identifier for the diagnosis record.
admission_id	Integer (FK)	Foreign key linking to the Admissions table.
icd10_code	String	Standard medical classification code for the diagnosis.

| Table: Executive_Healthcare_Performance

A comprehensive, denormalized dataset used for high-level executive reporting and dashboard visualization.

Column Name	Data Type	Description
patient_id	Integer	Unique identifier for the patient.
encounter_id	Integer	Unique identifier for the medical encounter.
admission_datetime	DateTime	Date and time of hospital admission.
previous_discharge	DateTime	Date and time of the patient's prior hospital discharge, if applicable.
days_since_last_discharge	Decimal	Calculated time interval between encounters for readmission analysis.
discharge_datetime	DateTime	Date and time of hospital discharge.
ed_arrival_time	DateTime	Timestamp of arrival at the Emergency Department.
provider_seen_time	DateTime	Timestamp when the patient was first seen by a medical provider.
icd10_diagnosis	String	Primary ICD-10 diagnosis code for the encounter.
cpt_procedure	String	Current Procedural Terminology code for procedures performed.
cost_of_encounter	Decimal	Total financial cost associated with the medical encounter.
outcome	String	Clinical result of the stay (e.g., Recovered, Readmitted, Expired).
age	Integer	Patient age at encounter.
gender	String	Patient gender (e.g., Male, Female).
department	String	Clinical department responsible for care.
admission_type	String	Classification of the entry (Emergency, Urgent, Elective).
discharge_disposition	String	Status/destination of patient post-discharge.
severity_level	Integer	Patient acuity/severity score (1-5).
readmission_flag	Boolean	Binary flag (0/1) indicating if a readmission occurred.
